**Entech Welcomes A New Natural Gas Technical Manager**

Reading, PA - Entech Engineering, Inc. (Entech) is excited to announce the recent addition of Guojin (Gordon) Wang to our team. As a Senior Natural Gas Technical Manager, working out of the Reading, Pennsylvania Headquarters, Gordon will supplement our natural gas engineering staff with his 25+ years of hydrocarbon processing experience in liquids and crude, as well as natural gas mediums in various basins across the U.S. and Canada. Gordon earned his bachelor's degree in Coal Chemical Engineering from the China University of Mining and Technology, a master's degree in Coal Chemical Engineering from the China Coal Research Institute, and a Ph.D. in Petroleum Chemical Engineering from China University of Petroleum. He holds a Professional Engineering Certification from Alberta, Canada, and has advanced knowledge of software simulation and modeling systems used to create and/or evaluate processing facilities.

Entech's Principal and Natural Gas Manager, Tanner A. Sattler, P.G., said about Gordon:

*"We're excited to have Gordon join our team to further develop and round out the services we can provide to our clients to help them make more informed decisions. His ability and experience troubleshooting unique problems, and providing innovative solutions, is most welcome."*

Gordon brings nearly 30 years of experience in the natural gas engineering industry to enhance Entech's already established natural gas team. His areas of expertise include natural gas sweetening, dehydration, and recovery and liquefaction processes, with a focus on well heads, well pads, and central processing facility plants. Gordon's experience extends from composing process design criteria and control narratives, to supervising process engineers performing hydraulic calculations.
